

# Implementation Solutions

## Successful Deployments that Don't Cost an Arm or a Leg

Why spend more to implement a new or upgraded network infrastructure. Partner with us & keep more of your money without compromising on quality.

The efficiency and ease of an implementation plays a critical role in preserving the benefits associated with network enhancements and new technology deployments. Successful implementations require considerable planning, management and technical expertise.

Whether you are upgrading a single site or deploying a complex, multi-service network, NDI provides the critical resources required to ensure your success. NDI's implementation solutions facilitate rapid and successful deployments through a comprehensive portfolio of services designed to support all stages of a network implementation, including:

### *Site Surveys (Traditional WAN/LAN and Wireless)*

Prevent site-related delays by documenting valuable site information and verifying site preparation prior to deployment. NDI's trained engineers will gather information and evaluate your site against your design to identify and alert you of any potential problems that could jeopardize your installation.

### *Staging*

Minimize the risks associated with your installation by letting NDI pre-assemble, configure, and verify the proper operation of all of your components in a controlled laboratory environment prior to delivery to your site.

### *Project Management*

Meet your company's timelines and budget requirements by using an NDI project manager as your single point of contact throughout your implementation. Our experienced resources will work with you and your other vendors on all aspects of the project to ensure a successful deployment.

### *Installation*

Utilize our vast network of onsite technical resources to perform your installation activities. With your configuration and programming information, our technicians will inventory, install and test your solution to validate functionality.

- **Save Money without compromising on quality**
- **Multi-vendor, multi-technology capabilities**
- **Extensive network of Onsite field engineers with proper training, tools and experience**
- **Flexible installation hours**
- **Experienced project managers**
- **Controlled configuration and test environment**
- **Time-tested implementation processes**
- **Unparalleled logistics capabilities**

# The NDI Advantage

When it comes to implementing a network enhancement or new technology, time is money. NDI provides the resources, expertise, tools and processes required to efficiently and effectively deploy today's leading technology products and solutions so you can reap the benefits. By leveraging the experience NDI has gained from thousands of network deployments, our customers benefit from:

## *Efficient Multi-vendor Deployments*

Experience, partnerships and certifications on the leading technologies and best-of-breed products allow NDI to efficiently and rapidly implement complex multi-vendor, multi-service projects.

## *Increased Productivity*

NDI's implementation resources complement your existing resources and staff to accelerate the speed and accuracy of your deployments.

## *Minimized Risks*

By verifying your site preparedness and thoroughly testing your technology components before they are integrated into your business, NDI minimizes your risks and facilitates a smoother transition.

## *Reduced Implementation Costs*

NDI's successful, timely completion of your implementation the first time allows you to contain your implementation costs while accelerating your return on your technology investment.

## *Scalability*

Our extensive network of technical resources coupled with time-tested processes allows us to scale our implementations to meet aggressive timelines with successful results.

## *Flexibility*

With flexible hours of installation, NDI can complete your implementation with minimal disruption to your business. Additionally, NDI's implementation services and processes can be adapted to meet your company's individual resource, timeline and budget requirements.
